

INTRODUCTIN TO COMPUTING WITH LABORATORY
(ICOM 111)
1st /SY 2025-2026

Section: IT 1Y1-4

Full Name: DELA TORRE, LUIS AURELIO, N.

Date: August 7, 2025

Instructor: MS. MARY JOYCE R. DEL MUNDO

PRELIM: ASSESSMENT TASK 1: IDENTIFYING COMPUTING DEVICES

1. What are the advantages of different computing devices?

- As a student, I think different devices are useful depending on what you need. Desktops are super powerful and good for school projects that need heavy programs, like editing videos or coding. Laptops are great because you can bring them anywhere perfect for doing homework or attending online classes. Tablets are light and easy to use, which is nice for reading notes or watching lessons. And of course, smartphones are super handy for quick research, checking messages, or using school apps. Each one has its own use depending on the situation.

2. Why Laptop Computers and Tablets are the most comfortable and accessible computing devices to use?

- For me, laptops and tablets are the easiest and most convenient to use. I can bring my laptop to school or use it at home to do assignments, join classes, or watch videos. It has everything I need like screen, keyboard, and battery all in one. Tablets are even lighter and easier to carry around, especially for reading or taking notes. They don't take up much space, and I can use them almost anywhere, which makes studying more flexible and chill.

3. Why server computers are very important in all computing devices?

- Honestly, server computers are super important even if we don't see them. They're the reason we can access school websites, save files on Google Drive, or use apps like Zoom and Gmail. Servers handle a lot of data and keep things running in the background, so we can do stuff online without any problems. If there were no servers, a lot of what we do in school using tech wouldn't even work. They're like the "behind-the-scenes" helpers that keep everything connected.
